## TS700

**Menvier Security.**  
**The most technically  
advanced intruder  
alarm solution.**

Menvier Security is a leading brand of Cooper Security Ltd, part of Cooper Industries who employ over 28,000 people in 100 manufacturing sites around the world.

Menvier Security has more than 20 years experience as a leading manufacturer of security systems for domestic and commercial premises, all of which exceed stringent industry standards.

Professional security alarm installers recommend Menvier Security because they know it represents excellence in technology, unfailing reliability and tremendous possibilities for expanding the system.

For the most comprehensive approach to security, don't make it difficult, make it Menvier Security.

# MENVIER SECURITY TS700

The Networker TS700 is a technically advanced intruder alarm system from Menvier Security. The system uses state-of-the-art electronics to provide comprehensive protection for both domestic and business premises. In contrast to the TS700's sophisticated operations, it is easy to programme. However, the most significant advantage of the TS700, for installers and customers, is unparalleled flexibility in configuration and control, giving users the highest levels of protection from intruders.

## Flexibility for growth

The TS700 adapts to meet changing security requirements. Alarm systems monitor specified locations in your premises such as offices, rooms, corridors and garages. Up to 16 of these *zones* can be monitored with the TS700. This gives you flexibility to extend your security system as you extend or change the layout of your premises.

## Flexibility in control

If your business or residence requires different security arrangements in different areas, for instance, where a degree of independent control over security is needed in particular departments or on certain floors, the TS700 can take care of it. That's because *zones* can be grouped together into up to 3 independently programmable *areas* often referred to as wards.

## Flexibility in detail

Part-setting is a useful feature that allows you to secure parts of your premises while permitting free access in other parts. This can be particularly convenient in a commercial environment when staff are working late or areas of the building are not occupied during certain times. In a domestic situation this feature allows the downstairs of a residence to be set during the night or the perimeter of the house and garage while everyone is watching TV.

## Flexibility for individuals

Requiring all members of staff and contractors to remember a single security code number leads to inconvenience and false alarms. The TS700 allows up to 12 individuals to create their own code numbers, often a requirement of your insurance company. Furthermore, varying levels of system control is assigned to these numbers. For example, cleaners can be permitted to set but not to unset the system.

## Improved management

The efficiency of management can be improved with information collected by the TS700's 200 event memory. It logs the time, date and user code of all system activations. This data gives an instant picture of who was where at any time of day or night, providing managers with a powerful investigative and analytical tool.

## Remote monitoring

Remote off-site alarm monitoring can be added to the TS700 system by connecting it to a commercial Alarm Receiving Centre via a RedCARE or other telephone link. These centres continuously monitor and verify system integrity and alarm activations and if necessary report them to the police.

## Alarm confirmation

To ensure maximum response from the Police it has become imperative that alarm activations are confirmed. The TS700 has the simplest and most cost effective form of alarm confirmation as standard – Sequential Alarm Confirmation. By transmitting clear information it indicates that a zone other than that which has caused the original alarm has activated hence confirming the alarm transmission is likely to be genuine.
